

Varnal[®]

CAVITY VARNISH

Varnal is a superior cavity varnish and tubuli seal. Varnal dries fast, hard, and is visible as a dull frosting on tooth surfaces when application is completed. Easily applied with a cotton pledget or brush, Varnal requires only one application. Varnal's special solvent system retains solids in solution; therefore no separate thinner is ever required. Varnal ensures restoration success and tooth protection from restoration materials.

Description	Size	Item No.
Varnal [®] Cavity Varnish	14 g	0801

Key Features

- One-step fast-drying cavity varnish
- Protects dentin, penetrates, fills, and seals tubuli
- Only one application required per tooth preparation
- Tooth need not be dried prior to application
- No burnishing required
- Compatible with amalgams and other restoration materials

Benefits

- Won't interfere with patient eating or drinking after procedure
- No thinner required to maintain original viscosity
